

SOLAYMAN EL MOUDEN

Software Engineering Student | Backend • DevOps • AI

Morocco | +212 699361992 | elmouden.syn@gmail.com | [GitHub](#) | [LinkedIn](#) | [solaymantech.me](#)

Available for a 4–6 month internship • Available immediately

PROFILE

Software engineering student focused on solving backend, infrastructure, and AI integration problems. Experienced in designing APIs, containerizing services, and deploying applications on real infrastructure — every personal project runs on a live server, not just localhost.

PROJECTS

LeetResume — *Live | Next.js, Prisma, PostgreSQL, XeLaTeX, Docker*

- Architected a PDF generation pipeline that templates resume data into LaTeX and compiles it with XeLaTeX inside an isolated, sandboxed Docker container.
- Integrated the DeepSeek API for AI-powered resume refinement, with streaming responses, conversation history, and prompt engineering for consistent output.
- Built the Prisma schema (migrations, seeding), NextAuth.js session management, and automated PostgreSQL backups on cron.

Mycel — ft_transcendence — *Repo | NestJS, PostgreSQL, Docker, Prometheus/Grafana | Group Project*

- Built a multi-tenant CRM backend in NestJS with JWT auth, role-based access control, and an AI chatbot powered by the DeepSeek API with custom intent-detection routing.
- Deployed a full observability stack — Prometheus scraping custom metrics, Grafana dashboards for latency and error rate — and automated DB backups, all as infrastructure as code.

Lazy Equation — *Live | React, TypeScript, Canvas API, Fastify*

- Built an interactive math and physics museum where every concept is a live, playable Canvas simulation instead of static text.
- Designed a complete dark design system and monorepo architecture, deployed behind an Nginx reverse proxy.

Inception — *Repo | Docker, Nginx, MariaDB, WordPress*

- Built a multi-container infrastructure from scratch using only base Debian/Alpine images, with custom Dockerfiles for WordPress, Nginx, and MariaDB.
- Configured TLS at the Nginx layer, Docker network isolation, named volumes, and environment-variable-driven secrets management.

ft_irc — *C++98, TCP/IP, poll(), IRC Protocol | Group Project*

- Built a non-blocking IRC server handling multiple clients through a single poll() loop over raw TCP sockets — no threads, no async framework.
- Implemented the full IRC protocol: auth handshake, NICK/USER registration, channels, private messaging, and operator commands (KICK, INVITE, TOPIC, MODE).

EDUCATION

1337 School – Mohammed VI Polytechnic University (UM6P) 2023 – 2026, Benguerir, Morocco

Software Engineering — systems programming, algorithms, networking, software architecture

Faculty of Sciences and Technology (FST) 2021 – 2023

Engineering of Networks and Information Systems

Preparatory Classes for the Grandes Écoles (CPGE) 2019 – 2021

Mathematics and Physics Track

SKILLS

Languages: C, C++, Python, TypeScript, JavaScript

Backend: NestJS, FastAPI, Node.js, REST APIs

Databases: PostgreSQL, Prisma

DevOps: Docker, Nginx, Git, Prometheus, Grafana

AI: LLM APIs, Prompt Engineering, AI Integration

Concepts: JWT/OAuth, Networking, Systems Programming, Observability

LANGUAGES

Arabic — Native | French — Professional | English — Professional
